Page-by-page guides

Each guide follows: Purpose → When to use it → How to get there → What you can do → Related pages.

Every route is also listed in the [complete page index](#).

Ask Zeus

Page	What it covers
Ask Zeus	Ask Zeus — AI assistant grounded on this cluster.

Ask Zyra

Page	What it covers
Ask Zyra	Ask Zyra — AI assistant grounded on this cluster.

Compute

Page	What it covers
Autoscaler	Cluster / VM autoscaler status and recommendations.
HPA	Horizontal Pod Autoscaler objects affecting related workloads.
Nodes	Kubernetes / virt node capacity and placement view.
Pods	Pod inventory including virt-launcher pods.
Scheduling	Scheduling constraints, node affinity, and placement hints.
VMs	VirtualMachine inventory — create, power, migrate, and inspect KubeVirt VMs.
Workloads	Cross-workload view of Deployments, StatefulSets, and VMs.

Favorites

Page	What it covers
ConsoleHub	Console hub for VNC, serial, and remote access sessions.
Mission Control	Mission Control home — fleet health, shortcuts, and live KubeVirt signals.
Fleet Constellation	Visual constellation of the VM fleet across namespaces and nodes.
Gallery Wall	Gallery of VM cards and status tiles for at-a-glance browsing.
Reactor Core	Reactor Core — high-density operational wall for hot workloads.
vCentre	vCentre-style inventory and ops surface for KubeVirt VMs.
VM Capsule	Focused single-VM capsule view for deep workbench ops.

Finops

Page	What it covers
Costs	FinOps cost view for VM and cluster spend.

Page	What it covers
Forecasting	Cost and capacity forecasting.

Network

Page	What it covers
Cilium	Cilium network status when Cilium is the CNI.
Dependencies	Service dependency graph for selected workloads.
Ingress	Ingress / route inventory for exposed services.
Network Intelligence	Network intelligence summary for the virtualization plane.
Network Policies	Kubernetes NetworkPolicy objects affecting VM namespaces.
Topology	Network topology across VMs, services, and nodes.

Observe

Page	What it covers
Alerts	Active alerts from the observability stack.
Custom Dashboards	User-defined observability dashboards.
Events	Kubernetes and KubeVirt events.
Heatmap	Density heatmap of resource pressure.
Incidents	Incident timeline and response hooks.
Insights	AI / analytics insights over fleet telemetry.
Logs	Log explorer for VM and platform workloads.
Metrics	Live and historical metrics for VMs and nodes.
Mission Control Wall	Full-wall Mission Control display mode.
Monitoring	Monitoring overview for the Veyron-managed estate.
Observability Overview	Observability overview landing page.
Performance	Performance profiles and hotspots across the fleet.
SLO	Service level objectives and burn-rate views.
Traces	Distributed traces when tracing backends are configured.

Ops

Page	What it covers
Actions	Queued / recent operator actions.
Chaos	Chaos experiments against the virtualization stack.
Disaster Recovery	Disaster recovery plans for VMs and namespaces.

Page	What it covers
Notifications	Notification channels and delivery preferences.

Platform

Page	What it covers
Template Foundry	Template Foundry — OS templates and app blueprints.
Blueprint Studio	Multi-VM blueprint authoring and apply.
Catalog	Workload and template catalog.
CRDs	CustomResourceDefinition catalog.
Custom Resources	Browse and edit custom resources.
GitOps	GitOps export and sync status for VeyronVM declarations.
Helm	Helm release inventory for the cluster.
Integrations	External integrations (ticketing, chat, IdP).
Operators	Operator / OLM status relevant to KubeVirt and companions.
Settings	Dashboard, auth, and AI provider settings.
Stack Health	End-to-end stack health for Veyron + KubeVirt + CDI.
Tenants	Multi-tenant boundaries and namespace mapping.
Webhooks	Webhook endpoints for automation.

Security

Page	What it covers
Audit	Audit trail of mutating Veyron and cluster actions.
Compliance	Compliance checks and evidence for the fleet.
Policies	Admission / VM policy enforcement surfaces.
Quotas	ResourceQuota and LimitRange views.
RBAC	Kubernetes RBAC review for Veyron operators and tenants.
Security Posture	Security posture across VMs and namespaces.
SOC	SOC-style security operations board.

Storage

Page	What it covers
Backups	Backup jobs and restore entry points for VMs.
Images	ContainerDisk / golden image catalog.
Snapshots	VolumeSnapshot / VM snapshot inventory and actions.

Page	What it covers
Storage	PVC, DataVolume, and storage class inventory for VMs.

66 guides. Regenerate: `node scripts/customer-docs/generate-guide-index.mjs` .

Ask Zeus

Purpose

Ask Zeus — AI assistant grounded on this cluster.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#ask-zeus`
- Nav: **Ask Zeus** → **Ask Zeus** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#ask-zeus` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Related pages

Ask Zyra

Purpose

Ask Zyra — AI assistant grounded on this cluster.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#ask-zyra`
- Nav: **Ask Zyra** → **Ask Zyra** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#ask-zyra` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Autoscaler

Purpose

Cluster / VM autoscaler status and recommendations.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#autoscaler`
- Nav: **Compute** → **Autoscaler** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#autoscaler` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

-

HPA

Purpose

Horizontal Pod Autoscaler objects affecting related workloads.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#hpa`
- Nav: **Compute** → **HPA** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#hpa` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Nodes

Purpose

Kubernetes / virt node capacity and placement view.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#nodes`
- Nav: **Compute** → **Nodes** (Browse mega-menu, Finder, or Spotlight )

What you can do

1. Open `/dashboard#nodes` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Pods

Purpose

Pod inventory including virt-launcher pods.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#pods`
- Nav: **Compute** → **Pods** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#pods` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Scheduling

Purpose

Scheduling constraints, node affinity, and placement hints.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#scheduling`
- Nav: **Compute** → **Scheduling** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#scheduling` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

VMs

Purpose

VirtualMachine inventory — create, power, migrate, and inspect KubeVirt VMs.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#vms`
- Nav: **Compute** → **VMs** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#vms` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Workloads

Purpose

Cross-workload view of Deployments, StatefulSets, and VMs.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#workloads`
- Nav: **Compute** → **Workloads** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#workloads` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

ConsoleHub

Purpose

Console hub for VNC, serial, and remote access sessions.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#console-hub`
- Nav: **Favorites** → **ConsoleHub** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#console-hub` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Mission Control

Purpose

Mission Control home — fleet health, shortcuts, and live KubeVirt signals.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#dashboard`
- Nav: **Favorites** → **Mission Control** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#dashboard` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Fleet Constellation

Purpose

Visual constellation of the VM fleet across namespaces and nodes.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#fleet-constellation`
- Nav: **Favorites** → **Fleet Constellation** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#fleet-constellation` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Gallery Wall

Purpose

Gallery of VM cards and status tiles for at-a-glance browsing.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#gallery-wall`
- Nav: **Favorites** → **Gallery Wall** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#gallery-wall` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Reactor Core

Purpose

Reactor Core — high-density operational wall for hot workloads.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#reactor`
- Nav: **Favorites** → **Reactor Core** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#reactor` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

vCentre

Purpose

vCentre-style inventory and ops surface for KubeVirt VMs.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#vcentre`
- Nav: **Favorites** → **vCentre** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#vcentre` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

VM Capsule

Purpose

Focused single-VM capsule view for deep workbench ops.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#vm-capsule`
- Nav: **Favorites** → **VM Capsule** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#vm-capsule` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Costs

Purpose

FinOps cost view for VM and cluster spend.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#costs`
- Nav: **FinOps** → **Costs** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#costs` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Forecasting

Purpose

Cost and capacity forecasting.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#forecasting`
- Nav: **FinOps** → **Forecasting** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#forecasting` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Cilium

Purpose

Cilium network status when Cilium is the CNI.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (</dashboard>) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: </dashboard#cilium>
- Nav: **Network** → **Cilium** (Browse mega-menu, Finder, or Spotlight [⌘K](#))

What you can do

1. Open </dashboard#cilium> and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth ([VEYRON_API_KEY](#) / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Dependencies

Purpose

Service dependency graph for selected workloads.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#dependencies`
- Nav: **Network** → **Dependencies** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#dependencies` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Ingress

Purpose

Ingress / route inventory for exposed services.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#ingress`
- Nav: **Network** → **Ingress** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#ingress` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Network Intelligence

Purpose

Network intelligence summary for the virtualization plane.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#network-intel`
- Nav: **Network** → **Network Intelligence** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#network-intel` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Topology

Purpose

Network topology across VMs, services, and nodes.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#topology`
- Nav: **Network** → **Topology** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#topology` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Alerts

Purpose

Active alerts from the observability stack.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#alerts`
- Nav: **Observe** → **Alerts** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#alerts` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Custom Dashboards

Purpose

User-defined observability dashboards.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#custom-dashboards`
- Nav: **Observe** → **Custom Dashboards** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#custom-dashboards` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Events

Purpose

Kubernetes and KubeVirt events.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (</dashboard>) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: </dashboard#events>
- Nav: **Observe** → **Events** (Browse mega-menu, Finder, or Spotlight [⌘K](#))

What you can do

1. Open </dashboard#events> and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth ([VEYRON_API_KEY](#) / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Heatmap

Purpose

Density heatmap of resource pressure.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#heatmap`
- Nav: **Observe** → **Heatmap** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#heatmap` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Stack Health

Purpose

End-to-end stack health for Veyron + KubeVirt + CDI.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (</dashboard>) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: </dashboard#stack-health>
- Nav: **Platform** → **Stack Health** (Browse mega-menu, Finder, or Spotlight )

What you can do

1. Open </dashboard#stack-health> and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth ([VEYRON_API_KEY](#) / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

-

Tenants

Purpose

Multi-tenant boundaries and namespace mapping.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#tenants`
- Nav: **Platform** → **Tenants** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#tenants` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Webhooks

Purpose

Webhook endpoints for automation.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#webhooks`
- Nav: **Platform** → **Webhooks** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#webhooks` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Audit

Purpose

Audit trail of mutating Veyron and cluster actions.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#audit`
- Nav: **Security** → **Audit** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#audit` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Compliance

Purpose

Compliance checks and evidence for the fleet.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#compliance`
- Nav: **Security** → **Compliance** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#compliance` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Policies

Purpose

Admission / VM policy enforcement surfaces.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#policies`
- Nav: **Security** → **Policies** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#policies` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Quotas

Purpose

ResourceQuota and LimitRange views.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#quotas`
- Nav: **Security** → **Quotas** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#quotas` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

RBAC

Purpose

Kubernetes RBAC review for Veyron operators and tenants.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#rbac`
- Nav: **Security** → **RBAC** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#rbac` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Security Posture

Purpose

Security posture across VMs and namespaces.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#security`
- Nav: **Security** → **Security Posture** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#security` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

SOC

Purpose

SOC-style security operations board.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#soc`
- Nav: **Security** → **SOC** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#soc` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Backups

Purpose

Backup jobs and restore entry points for VMs.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#backups`
- Nav: **Storage** → **Backups** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#backups` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Images

Purpose

ContainerDisk / golden image catalog.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#images`
- Nav: **Storage** → **Images** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#images` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Snapshots

Purpose

VolumeSnapshot / VM snapshot inventory and actions.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#snapshots`
- Nav: **Storage** → **Snapshots** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#snapshots` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Storage

Purpose

PVC, DataVolume, and storage class inventory for VMs.

When to use it

- Open this page when the job matches the purpose above
- Prefer **Mission Control** (`/dashboard`) first if you are unsure where to start
- Confirm API auth and namespace scope if lists look empty

How to get there

- Route: `/dashboard#storage`
- Nav: **Storage** → **Storage** (Browse mega-menu, Finder, or Spotlight `⌘K`)

What you can do

1. Open `/dashboard#storage` and wait for live API data from the Veyron server.
2. Use filters (namespace, label, status) when the page provides them.
3. Drill into a VM or resource row for detail, then jump to related surfaces (console, snapshots, policies).
4. For mutating actions (create VM, migrate, apply policy): review impact and role gates first.

If the page stays empty, check API health, auth (`VEYRON_API_KEY` / OIDC), KubeVirt CRDs, and that the workload namespace is selected.

Veyron — Complete page index

Every primary navigable dashboard route.

Generated: 2026-08-29 · 65 routes

Regenerate: `node scripts/customer-docs/generate-page-index.mjs`

Favorites

Page	Route	Purpose	Guide
Mission Control	<code>dashboard</code>	Mission Control home — fleet health, shortcuts, and live KubeVirt signals.	Open
Fleet Constellation	<code>fleet-constellation</code>	Visual constellation of the VM fleet across namespaces and nodes.	Open
Reactor Core	<code>reactor</code>	Reactor Core — high-density operational wall for hot workloads.	Open
Gallery Wall	<code>gallery-wall</code>	Gallery of VM cards and status tiles for at-a-glance browsing.	Open
vCentre	<code>vcentre</code>	vCentre-style inventory and ops surface for KubeVirt VMs.	Open
ConsoleHub	<code>console-hub</code>	Console hub for VNC, serial, and remote access sessions.	Open
VM Capsule	<code>vm-capsule</code>	Focused single-VM capsule view for deep workbench ops.	Open

Compute

Page	Route	Purpose	Guide
VMs	<code>vms</code>	VirtualMachine inventory — create, power, migrate, and inspect KubeVirt VMs.	Open
Nodes	<code>nodes</code>	Kubernetes / virt node capacity and placement view.	Open
Pods	<code>pods</code>	Pod inventory including virt-launcher pods.	Open
Workloads	<code>workloads</code>	Cross-workload view of Deployments, StatefulSets, and VMs.	Open
Scheduling	<code>scheduling</code>	Scheduling constraints, node affinity, and placement hints.	Open
HPA	<code>hpa</code>	Horizontal Pod Autoscaler objects affecting related workloads.	Open
Autoscaler	<code>autoscaler</code>	Cluster / VM autoscaler status and recommendations.	Open

Observe

Page	Route	Purpose	Guide
Monitoring	<code>monitoring</code>	Monitoring overview for the Veyron-managed estate.	Open
Metrics	<code>metrics</code>	Live and historical metrics for VMs and nodes.	Open
Alerts	<code>alerts</code>	Active alerts from the observability stack.	Open
Events	<code>events</code>	Kubernetes and KubeVirt events.	Open
SLO	<code>slo</code>	Service level objectives and burn-rate views.	Open
Performance	<code>performance</code>	Performance profiles and hotspots across the fleet.	Open

Page	Route	Purpose	Guide
Heatmap	heatmap	Density heatmap of resource pressure.	Open
Custom Dashboards	custom-dashboards	User-defined observability dashboards.	Open
Observability Overview	observability	Observability overview landing page.	Open
Insights	insights	AI / analytics insights over fleet telemetry.	Open
Traces	traces	Distributed traces when tracing backends are configured.	Open
Logs	logs	Log explorer for VM and platform workloads.	Open
Incidents	incidents	Incident timeline and response hooks.	Open
Mission Control Wall	mission-control	Full-wall Mission Control display mode.	Open

Storage

Page	Route	Purpose	Guide
Snapshots	snapshots	VolumeSnapshot / VM snapshot inventory and actions.	Open
Storage	storage	PVC, DataVolume, and storage class inventory for VMs.	Open
Images	images	ContainerDisk / golden image catalog.	Open
Backups	backups	Backup jobs and restore entry points for VMs.	Open

Network

Page	Route	Purpose	Guide
Ingress	ingress	Ingress / route inventory for exposed services.	Open
Network Policies	network-policies	Kubernetes NetworkPolicy objects affecting VM namespaces.	Open
Cilium	cilium	Cilium network status when Cilium is the CNI.	Open
Topology	topology	Network topology across VMs, services, and nodes.	Open
Dependencies	dependencies	Service dependency graph for selected workloads.	Open
Network Intelligence	network-intel	Network intelligence summary for the virtualization plane.	Open

Security

Page	Route	Purpose	Guide
Security Posture	security	Security posture across VMs and namespaces.	Open
Compliance	compliance	Compliance checks and evidence for the fleet.	Open
RBAC	rbac	Kubernetes RBAC review for Veyron operators and tenants.	Open
Policies	policies	Admission / VM policy enforcement surfaces.	Open
Quotas	quotas	ResourceQuota and LimitRange views.	Open
Audit	audit	Audit trail of mutating Veyron and cluster actions.	Open

Page	Route	Purpose	Guide
SOC	<code>soc</code>	SOC-style security operations board.	Open

Platform

Page	Route	Purpose	Guide
Helm	<code>helm</code>	Helm release inventory for the cluster.	Open
Operators	<code>operators</code>	Operator / OLM status relevant to KubeVirt and companions.	Open
CRDs	<code>crds</code>	CustomResourceDefinition catalog.	Open
Blueprint Studio	<code>blueprint-studio</code>	Multi-VM blueprint authoring and apply.	Open
Custom Resources	<code>custom-resources</code>	Browse and edit custom resources.	Open
Catalog	<code>catalog</code>	Workload and template catalog.	Open
Template Foundry	<code>app-store</code>	Template Foundry — OS templates and app blueprints.	Open
GitOps	<code>gitops</code>	GitOps export and sync status for VeyronVM declarations.	Open
Integrations	<code>integrations</code>	External integrations (ticketing, chat, IdP).	Open
Webhooks	<code>webhooks</code>	Webhook endpoints for automation.	Open
Tenants	<code>tenants</code>	Multi-tenant boundaries and namespace mapping.	Open
Stack Health	<code>stack-health</code>	End-to-end stack health for Veyron + KubeVirt + CDI.	Open
Settings	<code>settings</code>	Dashboard, auth, and AI provider settings.	Open

FinOps

Page	Route	Purpose	Guide
Costs	<code>costs</code>	FinOps cost view for VM and cluster spend.	Open
Forecasting	<code>forecasting</code>	Cost and capacity forecasting.	Open

Ops

Page	Route	Purpose	Guide
Chaos	<code>chaos</code>	Chaos experiments against the virtualization stack.	Open
Disaster Recovery	<code>dr</code>	Disaster recovery plans for VMs and namespaces.	Open
Actions	<code>actions</code>	Queued / recent operator actions.	Open
Notifications	<code>notifications</code>	Notification channels and delivery preferences.	Open

Ask Zeus

Page	Route	Purpose	Guide
Ask Zeus	<code>ask-zeus</code>	Ask Zeus — AI assistant grounded on this cluster.	Open
